

MVP Cloud Access Control

Most Valuable Platform For Long Term Security

Smarter Security for Every Door

The NAPCO MVP Cloud Access Platform provides secure, easy-to-manage access control for organizations of any size — from small offices to multi-building campuses.

Control doors, users, and credentials across your facilities from a smartphone or web browser while maintaining strong security & operational flexibility. Integrate with security & video, too.

Why Choose MVP

Stronger Security

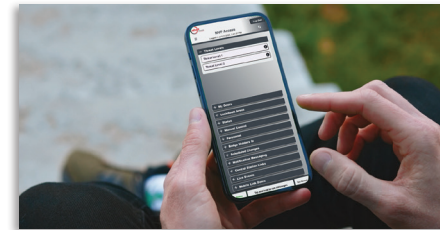

- Custom Access Control for all applications
- Instantly add or remove user access
- Monitor entry activity and door events
- Lockdown or unlock doors remotely – send alerts
- Control access schedules & permissions

Built to Grow With You

- Expand from a few doors to thousands
- Add buildings, users & credentials anytime
- Supports multiple facilities and locations
- Scalable Architecture- No hardware or software to change (*No rip out & replace*)

Simpler Management

- Easy App or App/Web-Browser
- No more onsite PCs, servers, hardware upkeep or IT issues
- Manage doors from anywhere
- Easily enroll users and credentials
- Automatic system updates

One Integrated Security Platform

MVP integrates multiple security technologies into a unified system:

- Cloud access control
- Intelligent access panels
- Intrusion system integration
- Wireless access locks
- Multiple credentials
- Video VMS integration

MVP EZ

Simple smartphone-managed access control ideal for small & mid-sized facilities

Perfect for:

- Offices
- Retail stores
- Medical practices
- Professional businesses
- Restaurants
- Multi-tenant & STR properties

App-Only

MVP Access

Easy Auto-Migration to Advanced Hybrid App/Browser-Based Enterprise Version- Advanced centralized access control designed for larger organizations & multi-site operations.

Ideal for:

- Corporate facilities
- School campuses
- Healthcare organizations
- Industrial facilities
- Transportation.
- Enterprise operations

Web Browser & App

MVP Cloud Platform Power Features

Flexible Solutions for Any Organization

The MVP platform combines Napco's own reliable hardware & new modern cloud technology, with all the advanced features needed for today's turbulent world. Budget-friendly, it helps you avoid the big traditional upfront capital expense—because MVP is instead, a predictable, monthly per-door access control cloud-service that's super affordable (OpEx).

– Simply scaling from a few doors and users to enterprise level - you'll never outgrow it— while keeping technology current with service auto-updates, and no surprise upgrade costs.

Powerful Hardware for Any Door

NA-Series Access Panels

Reliable controllers designed for modern commercial environments.

- Single-door & two-door access panels
- Supports up to 35,000 users
- Encrypted communications
- Onboard Ethernet; No Onsite Nodes
- Backup battery support
- Continues operating even during network interruptions, e.g., doors & elevators remain accessible

Wireless Access Locks

A full range of access locks - Cylindrical, mortise, deadbolt, exit trim & panic bars; for all IDs & door types inside & out. Award-Winning, Low Maintenance, Durability & Code Compliance

Available options and supported credential technologies include:

- Alarm Lock Trilogy® Network locks
- ArchiTech® designer wireless locks
- Marks USA wireless deadbolt locks
- Multi-Lock Gateways, 802.11 or POE
- Smartphone wallet credentials (NFC)
- Bluetooth mobile credentials
- Proximity cards
- MIFare smart cards
- PIN keypad access
- Multi-factor authentication

Integrated Security & Video

MVP integrates with NAPCO Security Systems to provide:

- Coordinated access & system disarm credentials
- Shared administrator & user privileges
- Unified system status & controls

The platform also supports integration with leading video management systems, enabling:

- Single Pane of Glass integration with growing list of video VMS brands, including Including Hanwha®, Digital Watchdog® (DW), etc.
- Visual verification of door events
- Centralized security management across facilities or global sites

6-Point Security Check List

Ask yourself about your current system:

- #1 Is your system always up to date automatically, without service calls or fear of legacy hardware not keeping up?
- #2 Can your system grow as your needs do? Or do you face a mandatory upgrade to a different level or system, incurring downtime, moving databases and/ or paying more?
- #3 Can you remove employee access instantly when needed? Can you also add users from anywhere you are? Are credential tech choices, secure or convenient enough?
- #4 Can you remotely manage or lockdown interior & exterior doors by area or globally? And globally provide free passage?
- #5 Can your system integrate seamlessly combining operations & control with the video & security systems?
- #6 Does it have Cybersecurity that's SOC 2 Audited for data/privacy protection?

If not, it may be time for today's better cloud-based solution. MVP Access by Napco.
