

Seamless Connections. Smarter Inspections. Better Results.

NAPCO Security Technologies and BuildingReports® introduced an enhanced integration between NAPCO's StarLink Fire® Max2 Cellular Commercial Fire Alarm Communicators and the BuildingReports inspection reporting platform. This collaboration expands compliance documentation, reporting accuracy, and system visibility for fire alarm dealers and Building Owners/Facility Managers.

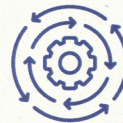

The StarLink Fire Max2 5G Dual SIM communicator, UL Listed and NFPA 72 compliant, is widely used as a cost-effective replacement for POTS lines. It delivers dual carrier connectivity across Verizon and AT&T networks with automatic selection for optimal signal performance. As part of this integration, NAPCO has advanced its communicator technology to provide a dedicated data path for BuildingReports, separate from the signal transmitted to the monitoring station, enabling enhanced data exchange without impacting alarm communications.

This integration partnership delivers:

STRONGER DOCUMENTATION

Electronic verification from addressable connected devices adds a secondary validation layer, delivering greater confidence that every device has been thoroughly inspected.

NO DISRUPTIONS

NAPCO's dedicated data path for BuildingReports is separate from the monitoring station signal, enabling enhanced data exchange without impacting alarm communications.

UNIFIED INSPECTION

StarLink Fire® Max2 communicator data connects directly into BuildingReports, bringing FACP activity and inspection results into a single, unified view.

BETTER TOGETHER

BuildingReports and NAPCO's StarLink Fire® Max2 unite to deliver enhanced compliance documentation and real-time system visibility.

The most trusted name in
compliance reporting

Security You Can Verify. Data You Can Trust.

Your inspection data is only as good as the system protecting it. BuildingReports is independently audited to **SOC 2, Type II** and **ISO/IEC 27001:2022**, the security and data-integrity standards every service company, facility, and AHJ should expect before handing over compliance data. Connected from the field to the invoice, and protected the whole way.
